Princeton University Press

2020

PREFACE

- PERSPECTIVE
- ORGANIZATION OF THE BOOK
- EDITORIAL STRATEGIES
  - *Data selection*
  - *Tabulation and visualization*
  - *Concepts and models*
  - *Epistemological*
- HUMAN DEMOGRAPHY IN TREE OF LIFE CONTEXT
  - *Human biology shaped mainstream demography*
  - *Demographic characteristics*
  - *Databases*
  - *Biology to demography*
  - *Human demography to biological demography*
- ACKNOWLEDGMENTS

PERMISSIONS

CHAPTER 1: DEMOGRAPHY BASICS

INTRODUCTION

BASIC FORMALIZATION

- DEMOGRAPHIC LEVELS AND TRAITS
- AGE AND THE LIFE COURSE
- TYPES OF DATA

POPULATION CHARACTERISTICS

- POPULATION SIZE
- POPULATION DISTRIBUTION
- POPULATION STRUCTURE
- POPULATION CHANGE (SIZE)
- POPULATION CHANGE (SPACE)

BASIC DEMOGRAPHIC DATA

- EXPLORATORY AND SUMMARIZATION
  - *Visual inspection of raw data*
  - *Standard deviation*
  - *Histograms*
  - *Box plots*
- LORENZ CURVES AND GINI COEFFICIENTS
- LEXIS DIAGRAMS
  - *Concept*
  - *Lexis diagram: Example applications*
- DEMOGRAPHIC TIME: EXTENSIONS BEYOND AGE-PERIOD-COHORT
  - *Variants of Age-Period-Cohort (APC)*
  - *Variants of Thantological Age-Period-Death Cohort (TPD)*
  - *Variants of Thantological Age-Chronological Age-Lifespan (TAL)*
  - *Variants of Lifespan-Chronological Age-Death year (LCD)*

COHORT CONCEPTS

- RATES, RATIOS AND PROPORTIONS

CHAPTER 2: LIFE TABLES

INTRODUCTION

THE BASIC LIFE TABLE

- LIFE TABLE RADIX
- LIFE TABLE RATE FUNCTIONS
- CONSTRUCTION OF COHORT LIFE TABLE
- PARAMETER VISUALIZATION
- LIFE TABLE CENSORING
- PERIOD LIFE TABLES
  - *Background*
  - *Construction*
- PRIMACY OF LIFE EXPECTANCY

THE ABRIDGED LIFE TABLE

- NOTATION, CONCEPTS AND COLUMNS
- CONSTRUCTION OF ABRIDGED COHORT LIFE TABLE
- COMPARISON OF ABRIDGED AND COMPLETE LIFE TABLE
- PERIOD AND COHORT LIFE TABLE CONCEPTS
  - *Gaps and lags*
  - *Cross-sectional average length of life (CAL)*

METRICS OF LIFE TABLES

- MEASURES OF CENTRAL TENDENCY
- CENTRAL DEATH RATE
- LIFE TABLE AGING RATE
- LIFE TABLE ENTROPY
- SENSITIVITY ANALYSIS
- EXAMPLE SINGLE DECREMENT PROCESSES
- LIFE TABLE AS STATIONARY POPULATION

CONSIDER FURTHER

CHAPTER 3. MORTALITY

INTRODUCTION

DISCRETE MORTALITY

CONTINUOUS MORTALITY: THE CALCULUS OF MORTALITY

- THE FORCE OF MORTALITY
- AN EMPIRICAL MODEL
- SMOOTHING AGE-SPECIFIC MORTALITY RATES

MORTALITY MODELS

- DE MOIVRE MODEL
- GOMPERTZ MODEL
- MAKEHAM MODEL
- EXPONENTIAL MODEL
- WEIBULL MODEL
- LOGISTIC MODEL
- SILER MODEL

MORTALITY DRIVES THE LIFE TABLE

DEMOGRAPHIC HETEROGENEITY AND SELECTION

- MODEL DERIVATION FOR DEMOGRAPHIC HETEROGENEITY
- DISTRIBUTION OF FRAILTY
- EXAMPLE OF TWO SUB-COHORT HETEROGENEITY MODEL

Compositional interpretation of the medfly mortality

MORTALITY METRICS

Average lifetime mortality
Mortality change indicators
Mortality scaling
Threshold mortality
Standard deviation of mortality
Mortality in the human population

CONSIDER FURTHER

CHAPTER 4. REPRODUCTION

BACKGROUND

Overview of terms and concepts
Patterns of Reproduction

BASIC CONCEPTS

BIRTH INTERVALS AND RATES

Basic age-specific birth metrics
Lexis diagram: Births by age and period
Per capita reproductive rates
Daily Rates
Lifetime rates and mean ages
Previous and remaining reproduction
Rate generalizations

REPRODUCTIVE HETEROGENEITY

Birth intervals
Reproductive parity
Daily parity
Cumulative parity

INDIVIDUAL-LEVEL REPRODUCTION

Event-history graphics
Cohort vs individual patterns
Importance of individual-level data
Models for Individual-level Reproduction
Model 1: Three adult stages
Model 2: Reproductive clock
Model 3: Working and retired flies

PARITY PROGRESSION

FERTILITY MODELS

AND CONSIDER

CHAPTER 5: POPULATION I: BASIC MODELS

FOUNDATIONAL CONCEPTS

Population rates
The Balancing Equation
Doubling Time and Half-life
Population Growth: Subpopulations and Sequence
Subpopulations

Sequence of Growth Rates

THE STABLE POPULATION MODEL

BACKGROUND
Historical
Uses and assumptions of the model
Derivation
POPULATION PARAMETERS
Intrinsic Rates: Birth, Death and Growth (r)
Intrinsic rate of increase: Analytical approximations
Intrinsic birth and death rates
Net Reproductive Rate
Stable Age Distribution
Mean Generation Time
POPULATION PROJECTION
Leslie Matrix
Example Iteration
Population Projection: Drosophila melanogaster

FUNDAMENTAL PROPERTIES OF POPULATIONS

THERE ARE A NUMBER OF PROPERTIES OF POPULATION DYNAMICS AND STRUCTURE THAT EMERGE FROM THESE BASIC MATRIX MODELS THAT CAN BE NOTED.
AGE STRUCTURE TRANSIENCE
CONVERGENCE TO A STABLE STATE
INDEPENDENCE OF INITIAL CONDITIONS
FERTILITY AND MORTALITY
CHANGING SCHEDULES AND UNCHANGING AGE STRUCTURE
DETERMINANTS OF AGE STRUCTURE
EFFECT ON R OF REPRODUCTIVE TIMING
SPEED OF CONVERGENCE
POPULATION MOMENTUM
QUESTIONS TO CONSIDER WHEN EVALUATING MATRIX MODELS

CONSIDER FURTHER

CHAPTER 6: POPULATION II: STAGE MODELS

INTRODUCTION

MODEL CONSTRUCTION AND ANALYSIS

BASIC STAGE-STRUCTURED MODEL
Assumptions
PERTURBATION ANALYSIS

STAGE-BASED MODELS FOR MODULAR ORGANISMS: PLANTS

BACKGROUND
MODEL I: GROWTH AND RENEWAL
MODEL II: GROWTH, SHRINKAGE AND DORMANCY
MODEL III: CONNECTING POPULATIONS

STAGE-BASED VERTEBRATE MODELS

MODEL I: SEA TURTLES
Model construction of a threatened species
Matrix projection
Perturbation analysis
MODEL II: KILLER WHALES

Model construction of a species with a post-reproductive life stage
Perturbation analysis

BEYOND THE BASIC STAGE MODEL

EXTENSIONS AND REFINEMENTS OF THE MODEL
INTEGRAL PROJECTION MODEL

RELATIONSHIP BETWEEN LESLIE MATRIX AND LEFKOVITCH MODELS

MODEL CONSTRUCTION USING THE SAME DATA
Life Cycle Graphs and Life Tables
Fertility Parameterization: Leslie and Lefkovitch models
Constructing the Leslie Matrix
Constructing the Lefkovitch Matrix
MODEL SYNTHESIS
Lotka equation as foundation
Life tables as stationary population models: Single decrement life tables
Life tables as stationary population models: Multiple decrement and multistate life tables
Stationary population models as life tables: Leslie model
Stationary population models as life tables: Lefkovitch model
COMPARISON OF MODEL PROPERTIES

CONSIDER FURTHER

CHAPTER 7: POPULATION III: EXTENSIONS OF STABLE THEORY

INTRODUCTION

TWO-SEX MODELS

BASIC TWO-SEX PARAMETERS
SEX RATIO AT AGE X AND INTRINSIC SEX RATIO
AGE-SPECIFIC SEX-RATIO

STOCHASTIC DEMOGRAPHY

GENERAL BACKGROUND
ENVIRONMENTAL VARIATION IN VITAL RATES
Stochastic Rate of Growth
Strong and weak ergodicity

MULTIREGIONAL DEMOGRAPHY

LOCATION AGGREGATED BY BIRTH ORIGIN
LOCATION DISAGGREGATED BY BIRTH ORIGIN
AGE-BY-REGION PROJECTION MATRIX
COMPARISON OF MODELS

HIERARCHICAL DEMOGRAPHY

BACKGROUND
HONEYBEE: INDIVIDUAL-TO-COLONY
Concept of superorganism
Assumptions
Growth Limits
Colony-level dynamics
Population level dynamics
General properties

CONSIDER FURTHER

CHAPTER 8: HUMAN LIFE HISTORY AND DEMOGRAPHY

INTRODUCTION

BIODEMOGRAPHIC SYNOPSIS

HUMAN DEMOGRAPHY AS EVOLUTIONARY LEGACY
DEVELOPMENTAL STAGES
REPRODUCTION
Basic intervals
Case study: French-Canadian women
FAMILY EVOLUTION
Background
Juvenile help
Human family
HUMAN LIFESPAN
ACTUARIAL PROPERTIES
Human mortality
Human life table
Migration patterns

HEALTH DEMOGRAPHY I: ACTIVE LIFE EXPECTANCY

CONCEPTS
BASIC LIFE TABLE MODEL
WORKED PROBLEM

HEALTH DEMOGRAPHY II: THE MULTIPLE DECREMENT LIFE TABLE

GENERAL CONCEPTS
WORKED PROBLEM
Cause of death data
Probability of dying of cause i
Competing risk estimation
Elimination of cause tables

FAMILY DEMOGRAPHY

FAMILY LIFE CYCLE
EXAMPLE: CHARLES DARWIN'S FAMILY

KINSHIP

CONCEPTS
TYPES OF KIN
Examples of relationships
Biological pathways
PEDIGREE CHARTS
Lineal kin
Colineal kin
Ablineal kin—same generation
Ablineal kin—different generation
PEDIGREE COLLAPSE

CONSIDER FURTHER

CHAPTER 9: APPLIED DEMOGRAPHY I: ESTIMATING PARAMETERS

INTRODUCTION

ESTIMATING POPULATION NUMBERS

COMPLETE COUNTS
INCOMPLETE COUNTS

INDIRECT COUNTS
MARK-RECAPTURE
HUNTING EFFORT
CHANGE-IN-RATIO METHOD

ESTIMATING SURVIVAL

MARK-RECAPTURE METHODS
Marking and tagging individuals
Incomplete data
Cormack- Jolly-Seber Model
Worked example
Multistate Models
Mark-recapture as cohort analysis
Visualizing the demography of mark-recapture

ESTIMATING POPULATION GROWTH RATES

GROWTH RATE FROM POPULATION NUMBER
GROWTH RATE FROM AGE STRUCTURE

POPULATION STRUCTURE

AGE STRUCTURE
STAGE STRUCTURE

EXTRACTING PARAMETERS FROM CAPTIVE COHORTS

CAPTIVE COHORT LIFE TABLE
MORTALITY EQUIVALENCIES
SURVIVAL CURVE ANALYSIS
POPULATION STRUCTURE
Frailty structure
Age structure

CONSIDER FURTHER

CHAPTER 10: APPLIED DEMOGRAPHY II: EVALUATING AND MANAGING POPULATIONS

INTRODUCTION

COMPARATIVE DEMOGRAPHY

BASIC METRICS
Survival and mortality curves
Life table metrics
Gompertzian analysis
COMPARATIVE MORTALITY DYNAMICS
Mortality slopes
Mortality ratios
Mortality contributions to e_0
Mortality proportional equivalences

HEALTH AND HEALTHSPAN

CONDITION SCORING: AFRICAN BUFFALO
Background
Condition indices
Health multistate life table
ACTIVE LIFE EXPECTANCY: FRUIT FLIES
Biomarker of aging
Event history chart

Evaluation of active health expectancy
INVASION STATUS AS HEALTH CLASSIFICATION FOR CITIES
Application of life table methods
BIOLOGICAL CONTROL AS HEALTH DEMOGRAPHY
Irreplaceable mortality
Multiple decrement life table of a pest

POPULATION HARVESTING

INSECT MASS REARING
Single-age/stage harvesting
All-age/stage harvesting
CULLING: AFRICAN ELEPHANTS
Background
Culling as management actuarial strategy

CONSERVATION

HUNTING
Age- and season-specific hunting
Rear and release
Trophy hunting: African Lions
POACHING: RHINOCEROS
Background
Competing risk model
CAPTIVE BREEDING IN CONSERVATION BIOLOGY
Background
Demography captive breeding: African lion

APPENDIX: VISUALIZATION, DESCRIPTION AND MANAGEMENT OF DEMOGRAPHIC DATA

APPENDIX I: VISUALIZATION OF DEMOGRAPHIC DATA

EVENT HISTORY CHART

INDIVIDUAL-LEVEL DATA
CONSTRUCTION METHODS

OVERVIEW OF OTHER MAJOR GRAPH TYPES

BAR CHARTS
DOT PLOT
HISTOGRAM
SCATTER PLOT
BUBBLE CHART
AREA CHARTS
LINE CHARTS
BOX PLOTS
HEAT MAPS
STRIP PLOTS
PIE CHARTS
HELPFUL RESOURCES FOR VISUALIZING DATA

APPENDIX II: DEMOGRAPHIC STORYTELLING

DEMOGRAPHIC STORYTELLING: SELECTED EXAMPLES
Leonardo Fibonacci: Rabbit breeding
Thomas Malthus: Population growth and food supply
Charles Darwin: The struggle for existence
P. B. Medawar: Actuarial immortality

DEMOGRAPHY STORIES THROUGH GRAPHICS OR SCHEMATICS
Demographic transition
Age pyramids
The greatest walk
HELPFUL RESOURCES FOR DEMOGRAPHIC STORYTELLING

APPENDIX III: MANAGEMENT OF DEMOGRAPHIC DATA

DATA MANAGEMENT PLAN AND DATA LIFECYCLE
DATA AND DATA DOCUMENTATION
Data, data types and data categories
Methods documentation, data dictionaries and file codes
ORGANIZATION
Folder and file naming conventions
Storage
HELPFUL RESOURCES FOR DATA MANAGEMENT

INTRODUCTION

GROUP 1:SURVIVAL, MORTALITY AND LONGEVITY

SURVIVAL AND LONGEVITY
S 1. Probability of same year deaths of sisters is extremely small.
S 2. Truncated life expectancy
S 3. Survival projections
S 4. A different way to look at survival—life increments
S 5. A 1-year survival pill is most effective near e(0)
S 6. Redundancy increases system reliability
S 7. Five important and useful period measures of longevity
S 8. A simple equation for producing survival curves
S 9. Computation of life overlap of two or more persons
MORTALITY
S 10. Re-parameterization of Gompertz using modal age, M
S 11. Excess mortality rate
S 12. Mortality elimination
S 13. Quiescent period emerges in cohort but not period mortality
OLDEST
S 14. Effects on e(0) of death elimination is small through middle age
S 15. Estimating mortality trajectories in supercentenarians
S 16. Non-aging 105-year old Italian women
S 17. Actuarially speaking, 92 years old is halfway to 100 years old
S 18. The probability becoming the oldest person is small
S 19. A woman would live 106 years if given a cat-like nine lives
LIFE COURSE
S 20. Relative age
S 21. Retirement age based on remaining life expectancy
S 22. Effects of classmate age differences
SPORT CAREER
S 23. Major League Soccer (MLS)
S 24. National Basketball Association (NBA)

GROUP 2: POPULATION, STATISTICAL, EPIDEMIOLOGICAL AND CATASTROPHIC

POPULATION
S 25. Growth rate for 40 year-old men to have two 20-year old wives
S 26. Interaction of mortality and fertility on r
S 27. Sex ratio in stable populations is independent of growth rate

S 28. Populations can experience "transient" stationarity
S 29. Effect on growth rate of female migration
S 30. Person years ever lived
S 31. Tempo effects
S 32. Birth rates in stable vs stationary populations
S 33. Super-exponential growth
S 34. Mean age of death in growing population

STATISTICAL

S 35. Descriptive statistics
S 36. Comparing lifetime longevity using the t-test
S 37. Conditional probability of Alzheimer's Disease
S 38. Peak-aligned averaging
S 39. Correlation of ages of death for twins
S 40. Accuracy and precision
S 41. Two persons having same birthday in a group of 80 is near 100%

EPIDEMIOLOGICAL

S 42. Prenatal famine exposure
S 43. Direct evidence of demographic selection

CATASTROPHIC

S 44. Napoleon's Grand Armée
S 45. The Donner Party disaster—mediation by age, gender and kinship
S 46. Actuarial analysis of the Titanic disaster: Hypothesis testing
S 47. Demography of 9/11 terror attack victims

GROUP 3: FAMILIAL, LEGAL, ACTUARIAL AND ORGANIZATIONAL

FAMILY

S 48. Strategy for choosing the "best" spouse
S 49. Stopping rules for number of girls
S 50. Children already born and left to be born
S 51. Family size with boy and girl target numbers
S 52. Mortality of 10-year old girls is incredibly low
S 53. Marriage duration
S 54. Contraceptive effectiveness
S 55. Lifespan inheritance
S 56. Society with extraordinarily long-lived women
S 57. Likelihood of golden wedding anniversary

TORTS

S 58. What is a life worth? Working life estimation in children
S 59. Value of statistical life
S 60. What is a life worth? Victim compensation fund of the 9/11 attack.

Actuarial Science

S 61. Yield on deposit, P, at interest rate, r
S 62. Payments for financial goal
S 63. Monthly deposits to meet savings goal
S 64. Monthly mortgage payments for 30-year mortgage
S 65. Payments to retire credit card debt
S 66. Bank savings for retirement
S 67. A small mutual fund concept
S 68. A large scale mutual fund concept
S 69. Burden in old-age pension

ORGANIZATION

S 70. Rejuvenating organizations
S 71. Gender parity in university hiring

GROUP 4: BIOMEDICAL AND BIOLOGICAL

BIOMEDICAL
S 72. Some persons are cured
S 73. Chances of false positives in cancer diagnoses
S 74. Visualizing health—hypertension
S 75. Trajectories of chronic illness
S 76. The Will Rogers phenomenon: Migrating frailty groups
S 77. Lead time bias in disease detection
ANIMAL BIODEMOGRAPHY: SELECTED STUDIES
S 78. Whooping crane population
S 79. Gorilla population decrease
S 80. Longevity minimalists: Force of mortality in mayflies
S 81. Dog-to-human year conversions depend on dog breed
S 82. Impact of parasitoid in depends on all-cause mortality
ANIMAL BIODEMOGRAPHY: SELECTED MODELS
S 83. Pace and shape of aging.
S 84. Population extinction
S 85. Spatial mark-recapture
S 86. Immortality assumption in vectorial capacity model
CHRONODEMOGRAPHY
S 87. Fish otoliths as black box recorders
S 88. Tree rings: Records of age and injury
S 89. Forensic entomology: Insects as crime tools

CHAPTER 11: BIODEMOGRAPHY SHORTS

INTRODUCTION

GROUP 1:SURVIVAL, MORTALITY AND LONGEVITY

SURVIVAL AND LONGEVITY
S 1. Truncated life expectancy
S 2. Survival projections
S 3. A different way to look at survival—life increments
S 4. A 1-year survival pill is most effective near e(0)
S 5. Redundancy increases system reliability
S 6. Five important and useful period measures of longevity
S 7. A simple equation for producing survival curves
S 8. Computation of life overlap of two or more persons
MORTALITY
S 9. Re-parameterization of Gompertz using modal age, M
S 10. Excess mortality rate
S 11. Mortality elimination
S 12. Quiescent period emerges in cohort but not period mortality
S 13. Probability of same year deaths of sisters is extremely small.
S 14. Effects on e(0) of death elimination is small through middle age
S 15. Estimating mortality trajectories in supercentenarians
S 16. Evidence of the absence of lifespan limits—105 year-old Italian women
S 17. Advancing front of old-age survival—traveling demographic waves
S 18. Actuarially speaking, 92 years old is halfway to 100 years old
S 19. Why the oldest persons in the world keep dying
S 20. A woman would live 106 years if given a cat-like nine lives
LIFE COURSE
S 21. Relative age

S 22. Retirement age based on remaining life expectancy
S 23. Effects of classmate age differences
SPORT CAREER
S 24. Major League Soccer (MLS)
S 25. National Basketball Association (NBA)

GROUP 2: POPULATION, STATISTICAL, EPIDEMIOLOGICAL AND CATASTROPHIC

POPULATION
S 26. Growth rate for 40 year-old men to have two 20-year old wives
S 27. Interaction of mortality and fertility on r
S 28. Sex ratio in stable populations is independent of growth rate
S 29. Populations can experience "transient" stationarity
S 30. Effect on growth rate of female migration
S 31. Person years ever lived
S 32. Tempo effects
S 33. Birth rates in stable vs stationary populations
S 34. Super-exponential growth
S 35. Mean age of death in growing population
STATISTICAL
S 36. Descriptive statistics
S 37. Comparing lifetime longevity using the t-test
S 38. Conditional probability of Alzheimer's Disease
S 39. Peak-aligned averaging
S 40. Correlation of ages of death for twins
S 41. Accuracy and precision
S 42. Two persons having same birthday in a group of 80 is near 100%
EPIDEMIOLOGICAL
S 43. Prenatal famine exposure
S 44. Direct evidence of demographic selection
CATASTROPHIC
S 45. Napoleon's Grand Armée
S 46. The Donner Party disaster—mediation by age, gender and kinship
S 47. Actuarial analysis of the Titanic disaster: Hypothesis testing
S 48. Demography of 9/11 terror attack victims

GROUP 3: FAMILIAL, LEGAL, ACTUARIAL AND ORGANIZATIONAL

FAMILY
S 49. Strategy for choosing the "best" spouse
S 50. Stopping rules for number of girls
S 51. Children already born and left to be born
S 52. Family size with boy and girl target numbers
S 53. Mortality of 10-year old girls is incredibly low
S 54. Marriage duration
S 55. Contraceptive effectiveness
S 56. Likelihood of golden wedding anniversary
TORTS
S 57. What is a life worth? Working life estimation in children
S 58. Victim compensation fund of the 9/11 attack.
ACTUARIAL SCIENCE
S 59. Yield on deposit, P, at interest rate, r
S 60. Payments for financial goal
S 61. Monthly deposits to meet savings goal
S 62. Monthly mortgage payments for 30-year mortgage

S 63. Payments to retire credit card debt
S 64. Bank savings for retirement
S 65. A small mutual fund concept
S 66. A large scale mutual fund concept
S 67. Burden in old-age pension
ORGANIZATION
S 68. Rejuvenating organizations
S 69. Gender parity in university hiring

GROUP 4: BIOMEDICAL AND BIOLOGICAL

BIOMEDICAL
S 70. Some persons are cured
S 71. Chances of false positives in cancer diagnoses
S 72. Visualizing health—hypertension
S 73. Trajectories of chronic illness
S 74. The Will Rogers phenomenon: Migrating frailty groups
S 75. Lead time bias in disease detection
ANIMAL BIODEMOGRAPHY: SELECTED STUDIES
S 76. Whooping crane population
S 77. Gorilla population decrease
S 78. Longevity minimalists: Force of mortality in mayflies
S 79. Dog-to-human year conversions depend on dog breed
S 80. Impact of parasitoid in depends on all-cause mortality
ANIMAL BIODEMOGRAPHY: SELECTED MODELS
S 81. Pace and shape of aging.
S 82. Population extinction
S 83. Spatial mark-recapture
S 84. Immortality assumption in vectorial capacity model
CHRONODEMOGRAPHY
S 85. Fish otoliths as black box recorders
S 86. Tree rings: Records of age and injury
S 87. Forensic entomology: Insects as crime tools

APPENDIX: VISUALIZATION, DESCRIPTION AND MANAGEMENT OF DEMOGRAPHIC DATA

APPENDIX I: VISUALIZATION OF DEMOGRAPHIC DATA
